

## The ideal enterprise emergency notification and response solution

Improve emergency response time and communications by empowering your at-risk employees with wearable monitoring devices.

The discreet push of a button on the untethered devices provide for the generation and sharing of multiple streams of critical data to the Interface Advanced Central Command Centers. Simultaneously. All in near real-time.

## It's a seamless extension of Interface Interactive Monitoring services

**2-way voice communication**

**Rapid fire, evidentiary-grade photos**

**Advanced geolocation positioning**

### Features include:

- Embedded microphone and speaker that enables a 2-way voice connection between your device wearer and the Interface Central Command Center Intervention Specialists
- Configurable camera tasked to generate time, date and location-stamped photos
- Emergency action messaging
- Comprehensive onboarding and embedded operational training
- GNSS/GPS and cellular-assisted GPS for location and dispatch
- Turnkey, simple and cost-effective to deploy

## 24/7/365 monitoring from our Advanced Central Command Centers

Our Advanced Central Command Centers are the heart of Interface's digital video surveillance services. Interface currently monitors well over one million devices across North America and responds to more than 6 million events every year.

When an alarm is triggered, real-time video, images, sound and site information are transmitted to our Intervention Specialists in the Advanced Central Command Centers.
