

Still Using Intrusion Alarms With 3G Connectivity?

The 3G cellular communicator units in your intrusion alarm devices may stop functioning by 2022 as cellular network providers switch to advanced LTE and 5G.

Here is how 5G transition will impact your alarm system

Intrusion alarms that use 3G as either the primary means of connectivity or for backup connectivity may stop working or function with degraded capacity once the cellular carriers like AT&T and Verizon stop offering 3G services and move completely to LTE/5G in 2022.

It's Time to Switch to Interface

With an Interface managed intrusion alarm system, multi-location enterprises can rapidly upgrade their alarm systems to the latest technology across any number of locations in the US.

Interface specializes in next-generation DMP alarm solutions, known for reliability and made in the USA.

Our Advantages

Fully Managed Alarm Service
